

DIAGNOSTIC INVESTIGATION

Pacific Property Consultants' forensics experts diagnose the causes of building systems failure through both visual inspection and intrusive testing. The experts collect and log data using the latest technology, and test building components or products in the field, or at Pacific Property Consultants San Diego testing facility. Reports of expert findings, opinions, and recommendations for remediation are prepared as needed, and customized for each client. Claims presented under states' "right-to-repair" laws, such as California's SB800 law, are handled within the statutory framework, in an effort to avoid litigation.
