

High-Tech Builder Training

High-Tech Builder Training keeps your company on the cutting edge and miles ahead of your competitors. Pacific Property Consultants offers building science training and field classes for all types of construction issues, including window flashing, roofing, waterproofing, quality inspection techniques and building performance issues to name just a few.

To remain at the top of your game, a builder must know more about how his homes perform than anyone else, and his staff are vital to understanding how buildings can perform at the highest levels of durability, comfort and safety. Your field staff oversees your 'factory' and the product as it is being made, and are the first line of defense in eliminating defects, waste and risk. Start out with basic fundamentals and build on your knowledge with our empowerment programs, where we train the trainer so the value of your knowledge is extended throughout your organization. Pacific Property Consultants can provide field training to small groups (not exceeding 20) for hands-on learning experiences on the following topics:

- o Superintendent quality inspector training

- o Window and wall flashing techniques

- o Recessed window flashing & potshelves
- o Exterior rain screen and weather barriers
- o Below grade waterproofing
- o Blower door testing
- o Duct blaster® testing
- o Infra-red imaging
- o Custom training on much more!
